

SAMPLE MEDICAL REPORT

Hypertension / High Blood Pressure — Fictional Record for Application Testing

Patient	Rajesh Kumar	Age	52 years
Sex	Male	Date	03 September 2026
Patient ID	DEMO-2026-001	Report Status	SAMPLE

Chief Complaint

Patient reports occasional morning headache, mild dizziness, fatigue, and occasional sensation of increased heartbeat. No chest pain or shortness of breath reported.

Vital Signs

Parameter	Result
Blood Pressure	168/104 mmHg
Heart Rate	88 bpm
Respiratory Rate	18/min
Temperature	98.4°F
SpO2	98%
Weight	82 kg
Height	170 cm
BMI	28.4 kg/m²

Medical History

- History of elevated blood pressure for approximately 2 years.
- Inconsistent use of prescribed antihypertensive medication reported.
- No known history of diabetes.
- No previous heart attack or stroke.
- Family history: father had hypertension.

Laboratory Investigations

Investigation	Result
Hemoglobin	14.2 g/dL
WBC	7,800/μL
Platelets	2.45 lakh/μL
Serum Creatinine	1.1 mg/dL
Blood Urea	32 mg/dL
eGFR	78 mL/min/1.73m²
Fasting Blood Glucose	108 mg/dL
HbA1c	5.8%
Total Cholesterol	218 mg/dL
LDL	142 mg/dL
HDL	42 mg/dL
Triglycerides	171 mg/dL

ECG

Sinus rhythm. No acute ischemic changes noted. Mild voltage criteria suggestive of possible left ventricular hypertrophy.

Assessment

Persistently elevated blood pressure / suspected uncontrolled hypertension. Current blood pressure reading of **168/104 mmHg** is significantly elevated and requires medical assessment. A single reading is not sufficient to establish a diagnosis; repeated properly performed measurements and clinical evaluation are recommended.

Recommendations

1. Repeat blood-pressure measurements under appropriate resting conditions.
2. Consult a qualified physician for evaluation and treatment.
3. Take prescribed medications consistently and do not change or stop medication without medical advice.
4. Reduce dietary salt intake.
5. Follow a balanced diet and maintain a healthy weight.
6. Engage in appropriate regular physical activity as advised by a healthcare professional.
7. Monitor blood pressure at home and maintain a BP log.
8. Follow up with the physician for assessment of cardiovascular and kidney risk.

Emergency Warning

If blood pressure is **180/120 mmHg or higher**, especially with chest pain, severe headache, difficulty breathing, weakness/numbness, confusion, vision changes, or difficulty speaking, seek urgent medical attention.

Physician: Dr. Anil Sharma Department: General Medicine
